

VITA PROSTHETIC SOLUTIONS

Mould Chart

For the best dental prosthetics – natural, reliable, rich in variation.

It's so simple – three steps to the correct tooth mould!

1. Select the category / tooth linie

Decide on a category/tooth line based on the requirements of the case and indication.

2. Select the mould group

Select the appropriate shape group for the patient's face and jaw shape.

3. Determine the appropriate tooth mould

Determine the appropriate tooth mould based on the cuspid and laugh lines.

1. Select the appropriate category/tooth line

Vivid play of shape and shade for natural results.

Best variety of shade and moulds for all cases.

Solid, standard dentures with excellent cost efficiency.

Efficient CAD/CAM dentures for greater productivity.

> Recommended anterior/posterior combinations

> Recommended indication(s)*

	★			⊕			☑	😊
Anterior	VITAPAN EXCELL	VITAPAN PLUS	VITA PHYSIODENS	VITAPAN			VITA MFT	VITA VIONIC FRAME
Posterior	VITAPAN LINGOFORM		VITA PHYSIODENS	VITAPAN CUSPIFORM	VITAPAN SYNOFORM	VITA MFT		
Full dentures	●	●		●			●	●
Partial dentures	●	●	●	●			●	
Hybrid dentures			●					
Implant-retained dentures	●	●						
Geronto-prosthetics					●			

* These are recommended indications for the respective prosthetic solutions/denture teeth, but the entire spectrum of full/partial/hybrid and implant-retained dentures are typically possible!

2. Select the appropriate mould group

3. Determine the appropriate tooth mould

The required width and length of the anterior teeth are determined using the cuspid and the laugh line.

Laugh line

This line is the determining factor for the length of the upper anteriors. The tooth necks should be situated above this line.

Cuspid line

This line is critical for the width of the upper anteriors. The tips of the upper cuspids should be aligned with this line.
