

Vertex Dental

Casting System

Vertex™ Castagel Clear & Blue

Vertex™ Castagel can be used in combination with Vertex™ Castavaria or Vertex™ Castapress to produce effective a full or partial denture. With this system you use gel instead of plaster. Shrinkage will be prevented and time will be saved while transferring a wax setup by using a pouring type of acrylic.

Vertex™ Gelknife

With the Vertex™ Gelknife it is much easier to cut the gel into small pieces.

Vertex™ Castaflask

Using the Vertex™ Castaflask in combination with Vertex™ Castagel clear it is easy to control the whole process due to the transparency of the flask and the gel. The size is designed to control the shrinkage proces.

Vertex™ Canal cutters

The Vertex™ Canal cutter must be used in order to create pouring and ventilation channels in the gel.

Vertex™ Teeth holder

The Vertex™ Teeth holder is designed to release the wax from the teeth easily. Two types of teeth holders are available:

FVPOU0001 Vertex™ Teeth holder Metal

FVPOU0001A Vertex™ Teeth holder Plastic

The following products are related to the Casting System:

Vertex™ Thermometer
The covered thermometer can be mostly used for checking the Castagel's exact temperature before filling the flask.

Vertex™ PolyCure 25
For production due to it's capacity of 9 Vertex™ Castaflasks with 25 litre chamber.

Vertex™ MultiCure
0° - 100°
0 - 6 bar
0 - 12 hrs
20 cm x 22 cm

Vertex™ GelMelt 8
Full-automatic gel melting machine with 8 litre tank.
